UNFIRE ENERGY LENS

A transparent way to explore energy affordability.

- Independent technology and innovation studio
- Digital Solutions. Residential energy affordability
- Human decisions for consequential actions

THE PROBLEM

Clear assumptions matter more than savings promises.

- Households need understandable cost comparisons.
- Hypothetical tariffs are not real electricity prices.
- Sensitive decisions must remain with the people affected.

THE WORKING DEMO

Synthetic calculations. Verifiable arithmetic.

- 420 kWh per month. 60% peak-hour share.
- $94.08 baseline vs. $87.02 modeled scenario.
- $7.06 difference, strictly hypothetical.

SAFETY AND COST

No automatic payments. No invented integrations.

- Switch provider. Human approval required.
- Automatic payment. Denied.
- No paid API, login or telemetry in the demo.

ROADMAP AND DISCLOSURE

Start small. Validate. Keep control.

- 0–3 months. User research, legal data rights and accessibility.
- 3–6 months. One permitted and dated tariff data source.
- 6–18 months. Opt-in pilot, evidence and optional approval gateway.
